CDN 219 Web Design

Course Outcomes:

At the end of this course, students will be able to:

- Explain the fundamentals of how the internet works
- Organize web page structure and post assigned content
- Create hierarchical outline for any given textual document
- Format graphics properly for use on the web
- Create semantic HTML markup for content
- Create styling for content with CSS
- Create a website that orients itself responsively to multiple device formats

BASIC WEB DESIGN

Basic Web Design will introduce concepts and techniques related to designing, creating, and deploying content for the internet. Students will learn how to use HTML to structure content and how to use CSS to style that content. The course will introduce information architecture, wireframing, and semantic markup. Course work will include securing an ISP, creating and using a blog, organizing directories on a server, and creating web pages with functional navigation and hyperlinks. Students will also be introduced to web design topics such as accessibility, user experience, and responsive design. In lieu of a text book, students will be required to secure site hosting with an ISP.
